Foreword

This report continues the annual release of statistical information on the total use of reimbursed services for each person insured under Medicare. Other reports in the series detail information on utilization of medical care services. A listing of these reports appears inside the front cover. The reports are intended to give a comprehensive account of the amounts reimbursed under the program, the kinds of services paid for, the variations in utilization and reimbursement by age, race, and sex of the beneficiary, as well as his place of geographic residence. Such data illustrate the patterns of medical care in the United States for persons aged 65 and over. A fuller understanding of these patterns will contribute to improved health services not only for the aged but for the general population as well.

Many individuals in the Social Security Administration have assisted with the development of this series. The preparation of the reports is a function of the Division of Health Insurance Studies of the Office of Research and Statistics under the supervision of Howard West, director, and Aaron Krute, deputy director. Text preparation was the responsibility of Harry L. Savitt of the Program Statistics Branch. Contributions to the tabulation and presentation of the statistical content of this report were made by Irving Goldstein and Robert M. Dickerson of the Statistical Processing and Procedures Branch. Special acknowledgments for computer services are made to the Division of Health Insurance Statistical Data of the Bureau of Data Processing.

The General Tables were produced by the "System for Automated Tabular Composition," a computer system at the Social Security Administration headquarters in Baltimore, Maryland. They were set on Linotron equipment at the Government Printing Office in Washington, D.C.

THIS PUBLICATION is a section of a statistical report series produced from Medicare program records. Presented on a calendar year basis, describing services rendered in the year, the series includes sections on enrollment, characteristics of providers, inpatient care in hospitals and extended care facilities, outpatient hospital services, home health services, physicians' and other medical services, and overall summaries.

The primary objective of these reports is to provide data required to measure and evaluate program operation and effectiveness. Benefit payment operations furnish information about the amount and kind of hospital and medical care services used by persons aged 65 and over, as well as the expenditures for such services. The applications by hospitals, extended care facilities, home health agencies, and independent laboratories to participate in the program provide data on the characteristics of such providers of services. The claim number assigned to each individual serves as the link between the program services utilized and the demographic characteristics of each individual recorded in the health insurance entitlement master file.

The data-collection system has two inherent characteristics that determine the scope, detail, and flexibility of the available data. First, data are collected and maintained on an individual basis so that the beneficiary and his medical experience under the program form the basic unit. Second, records for each bill paid under the program and, for a sample of beneficiaries, records of diagnoses and surgical procedures are maintained on a centralized basis. Except for intermediary operating statistics such as those relating to workloads, costs, and the like, all program statistics are centrally prepared.

THE BASIC RECORDS

The statistical system is based on five related computer-tape records: the health insurance entitlement master file, provider record, hospital insurance (Part A) utilization record, medical insurance (Part B) payment record, and the record containing information from medical insurance bills for a 5-percent sample of supplementary medical insurance enrollees.

THE HEALTH INSURANCE ENTITLEMENT MASTER FILE

The health insurance entitlement master file identifies each aged person eligible for health insurance benefits and indicates whether he is entitled to hospital benefits, to supplementary medical insurance benefits, or to both of these benefits.

This record is used to create a health insurance card that is sent to each insured person. The card contains the individual's claim number (the number used for OASDI or railroad retirement programs). It indicates the entitlement of the individual for the two parts of the Medicare program.

The entitlement record provides the population data for each part of the program and therefore serves as the base for the computation of a variety of utilization rates, limited only by its demographic content.

PROVIDER RECORD

Every hospital, home health agency, extended care facility, and independent laboratory must apply for participation in the hospital insurance program in order to be reimbursed for services provided. Data included on the application forms have been recorded in the central provider record and are updated as facilities are recertified periodically, as new ones apply for participation, or as some leave the program. When the information in this provider file is combined with utilization data, it serves to relate the characteristics of facilities and agencies that provide care to the kinds and amounts of service used by persons insured under Medicare.

UTILIZATION RECORD FOR HOSPITAL INSURANCE

The administration of the hospital insurance program requires that two items of information be known about each person at the time of his admission to a hospital—his entitlement under the program and the extent to which he has used the benefits available to him under the "benefit period" concept.

When the patient is admitted to a hospital, the admission section of the inpatient hospital admission and billing form is completed by the hospital and forwarded through its intermediary to the Social Security Administration for recording in the central record. As soon as the record is checked, normally in less than 24 hours, the intermediary is informed of the patient's benefit status and of the number of days remaining during the "benefit period."

This information is then forwarded to the hospital. At discharge, the hospital completes the billing section of the form and sends it to the intermediary for payment. When approval for payment has been made, the intermediary forwards the claim to the Social Se-

curity Administration for inclusion in the central record.

As part of this process, information on diagnoses and surgical procedures are coded for a 20-percent sample of beneficiaries based on specific combinations of digits in the health insurance claim number. Copies of admission and billing forms are handled in a comparable manner by home health agencies and extended care facilities. The outpatient billing form is also transmitted to the Social Security Administration for recording in the central record after the bill is approved for payment by the intermediary.

All the information on utilization experience in hospital and extended care facilities that is needed to administer the "benefit period" provision is recorded in the central record. This information includes stays in certain nonparticipating institutions that meet the definition of a hospital or extended care facility under the law, and days of care not covered or reimbursable under the program.

Each admission and billing form contains both the beneficiary's claim number and the provider's identification number. The resulting tape record can be readily matched to the beneficiary files and the provider files. By this process, a statistical tape record is created for the sample of insured persons that contains all the available information needed for tabulation from the three files related to Part A utilization.

PAYMENT FOR MEDICAL INSURANCE

Payment or reimbursement under the SMI program is made only after receipt by the carriers (intermediaries involved in Part B of the Medicare program) of bills having allowed charges exceeding $50 during a calendar year period.

For the insured population, carriers need to know from a central source that the deductible has been met; thereafter, during the remainder of the calendar year, the only additional information required from the Social Security Administration for reimbursement or payment purposes is whether the person is still enrolled under the SMI program.

For administration and operation of the program, the Social Security Administration must have accurate and complete information on the amounts paid by the carriers for physician services and for other services and supplies under this part of the program. To meet these needs, carriers furnish a payment record consisting of tape, punched card, or other machine-readable record of each bill paid. A "bill" is defined as a request for payment from or on behalf of a beneficiary as the result of services provided by a single physician or supplier.

The payment record also contains selected items of information needed to supply an efficient basis for drawing samples of the bills. These items provide a sampling frame that may be used to draw additional samples designed to obtain specific information not furnished reliably by the basic sample of enrolled persons under the medical insurance program.

THE MEDICAL INSURANCE SAMPLE

Although the payment record provides a rapid method for summarizing payment data and a sampling frame for efficiently drawing additional samples of bills, it does not provide specific data on diagnoses, procedures, and related charges.

Basic statistics on the utilization of physician and other services covered under the supplementary medical insurance program are derived from bills paid by intermediaries to or on behalf of a continuous 5-percent sample of all enrolled persons. Intermediaries have been given specific combinations of digits of the health insurance claim number to be used in selecting the 5-percent sample, which is a sub-sample of the 20-percent sample used for hospital insurance program data.

Bills are submitted either directly on an SSA request for payment form, or on the SSA form in combination with the physician's billing form. Both methods are designed to provide information on the date and place of each service, the procedure carried out or service provided, the condition treated (diagnosis), and the physician's or supplier's charge for the specific service.

All of the bills of persons in the 5-percent sample to or for whom payment is made under the program, including those used to meet the annual $50 deductible, are included in the sample and coded. However, data are not available through these procedures for persons in the sample who do not meet the $50 deductible. Such data are collected by means of the Current Medicare Survey, with data made available in a separate report series.[1]

For hospital-based physicians who have authorized the provider to collect the fee for their services, the provider billing for patient services by physicians form is used. This form is completed for each patient. It includes descriptive information on the date and place of each service, the diagnoses, procedures, and the charges. These bills are received centrally for the 5-percent sample of persons enrolled for supplementary medical insurance.

Utilization of Reimbursed Services by Person, 1969

There are two parts to the Medicare program: The hospital insurance (HI) program insures against the cost of hospitalization and some related posthospital services, while the supplementary medical insurance program (SMI) pays for the services of physicians and of suppliers of many other medical services. This report, based on records for a 5-percent sample of the enrolled population brings together all bills on file for each person for services used in 1969. It presents data on the number of persons reimbursed, their demographic characteristics, the type of service for which reimbursement was made, and the amounts of reimbursement. The figures are compared with the parallel experience in 1967 and 1968, described in earlier reports in this series.[1] Also presented for the first time in this report are data showing regional variations in utilization and reimbursement of medical care services by age, race, and sex. Discussion of these regional data will be presented elsewhere.[2]

Medicare utilization and reimbursements reflected continued increases during 1969 compared with previous years. Enrollment increased by 1.4 percent, the number of persons using covered services for which there was some reimbursement increased by 8.8 percent, and reimbursements by 13.1 percent. As shown below, the absolute and relative increase in total reimbursements between 1968 and 1969 was considerably less than that between 1967 and 1968.

Total benefit payments reached $6 billion, of which $4.3 billion (71 percent) were under the hospital insurance program (HI) and $1.7 billion (29 percent) under the supplementary medical insurance (SMI) program (tables A and 1.5). More than 90 percent of expenditures for HI were for inpatient hospital care, while slightly less than 9 percent were for services in extended care facilities (skilled nursing facilities) and home health agency services. The decline in reimbursement for services in extended care facilities may be attributable in part to the application of expanded and clarified guidelines on the level of care covered in ECF's.[3] Only 6 percent of the funds for SMI were spent for outpatient hospital and home health services. The percentage distributions of the total reimbursements for 1968 and 1969 by type of benefit under HI and SMI follow:

Type of benefit	1968		1969	
Total (in millions)	$5,283		$5,976	
HI and/or SMI Percent	100.0		100.0	
HI	71.3	100.0	71.3	100.0
Inpatient hospital		90.2		91.5
Extended care facility		8.7		7.3
Home health agency		1.0		1.2
SMI	28.7	100.0	28.7	100.0
Physicians		94.9		93.9
Outpatient hospital		3.7		4.6
Home health agency		1.5		1.5

The average reimbursement for each person using covered services under Medicare (HI and/or SMI) and submitting a claim was $696, a 4–percent increase over the 1968 average of $670 (table A). For SMI the

[1] All outpatient services were transferred to SMI effective April, 1968. Total outpatient figures are shown for purposes of annual comparisons.

average was $209, only 2.4 percent over the 1968 figure of $204. However, for persons using hospital services as well as physician services, average reimbursement was $1,410, an 8–percent increase over the 1968 average of $1,311. These figures continue to reflect the high charges for illnesses requiring hospitalization as well as the high charges that result under the SMI program for the patient who is hospitalized.

Reimbursements under Medicare are made only after the beneficiary has used services for which charges exceed the deductible amounts and has filed a claim; thus, data based on reimbursements reflect the number of persons who have met these requirements. The number of persons whose claims exceed the deductible amounts depends in part on the level of charges for medical services. The number of persons reimbursed per 1,000 persons enrolled for either HI and/or SMI increased from 397.8 in 1968 to 426.8 in 1969, slightly more than 7 percent. This increase apparently reflected the increase of about 6 percent in medical care costs and prices that occurred between 1968 and 1969.[4]

[4] Loucele A. Horowitz, "Medical Care Price Changes 1967–71," Research and Statistics Note No. 6, Social Security Administration: March 24, 1972.

The rise between 1968 and 1969 in persons per 1,000 who were reimbursed could also have resulted from increased utilization of medical care services under the program. It is apparent from table A that the largest increase (8.3 percent) in persons using reimbursed services occurred under the SMI program. Data from the Current Medicare Survey (CMS) indicate that the actual rate of use of covered SMI services, rather than the rate of use of reimbursed services, was about the same for the two years.[5] CMS reports that the same proportion of the SMI population (79 percent) reported use of covered services in each of the years, while the percent meeting the deductible rose from 46 percent to 49 percent.[6] These data also show no increase over earlier years in the number of services received by those persons who reported using medical care in 1969. SMI reimbursement per person served rose slightly, but there was an 8-percent increase from 1968 to 1969 in persons per 1,000 who were reimbursed (table A). It would appear, therefore, that the rise in SMI reimbursements reflected increased medical care charges which resulted in greater numbers of persons with charges that exceeded the deductible.

On the other hand, as measured by the number of persons served per 1,000 enrolled population, utilization under hospital insurance, the major part of which is inpatient hospital services, increased only slightly from 1968 to 1969. The Current Medicare Survey estimated a 3–percent rise in covered days per 1,000 enrolled HI population.[7] Average reimbursement for each person served, however, inflated by increases in costs, rose by 9 percent between 1968 and 1969 (table A).

Description of the Data

The statistical system of the Medicare program is designed to assemble all of the claims for reimbursed services received by the Social Security Administration for a 5–percent sample of the enrolled population. These records are linked so as to make it possible to relate the various reimbursed services used by an individual. The data presented are based on these linked records covering services performed in 1969 and recorded in SSA central records at the time of tabulation—October 1971. Counts have been multiplied by 20 to give an estimate of the total number of persons who used benefits under the program.

The "person" concept.—Records for the Medicare program are so designed that bills for medical services can be assembled for each insured individual. Records kept on a "person" basis make it possible to cumulate total reimbursement to or on behalf of each individual. In addition to the extent of covered services he has used, the nature of these services and the charges for them can be determined. The tables in this report reflect, with one exception, the compilation of these bills for a 5–percent sample of the enrolled population. Because their number is small, bills for home health services for the entire Medicare population are included in the tables.

The tables are organized by characteristics of the insured person—age, race, sex, and place of residence. Since the records are brought together for services rendered over the entire year, changes in the characteristics of the insured person during the interval must be considered. The characteristics of race and sex do not change. Age for all persons alive at the end of 1969 was calculated as of July 1 of that year; but age for persons who died during the year was the age at date of death. Coverage for a person attaining age 65 can begin with the month he becomes 65. Since all enrollees "aging into" the program are covered for only part of the year, rates for the age group 65 and 66 are understated.

Changes in place of residence are entered into the record system as this information is received by SSA. Bills for services were associated with the personal information on record at the time the service and personal file were linked. Thus, an individual who notified the Social Security Administration that he changed his State of residence during the year could have had services recorded in more than one State. In tables 1.1-1.10 and 1.21-1.52, each person and his State or geographic region of residence were tabulated as a unique combination. As a result, persons who lived in more than one State or geographic region during the year and received reimbursed services in each area are recorded in each of these areas. Since beneficiaries who move are counted more than once by State, but only once nationally, the total number of persons served in the United States (or in all areas, a geographic region, or a division) will be less than the sum of the persons served in the individual States.

Persons are also counted individually for each service covered under the program (see, for example, table 1.12). Thus, the individual who received both in-hospital care and post-hospital home health services is counted in each column, but he is counted only once in the total column for all services under the hospital insurance program.

The individual who is counted under in-hospital care may have been hospitalized more than once in this period. About 4.1 million persons were discharged from hospitals in 1969 (table 1.2) while estimates from the Current Medicare Survey show that for 1969 there were about 6.1 million discharges from hospitals—or

[6] The percent of enrollees meeting the deductible reported in CMS is higher than the percent reimbursed because some persons have bills totaling to exactly $50, some do not request reimbursement, and because both the CMS figure and those in this publication are subject to sampling variability.

[7] Robert M. Gibson and Mildred Corbin, "Hospital Insurance Sample: Inpatient Hospital Utilization, 1969," CMS-25, Social Security Administration, April 2, 1973.

that 2 million of the discharges represented repeated hospitalizations.[8]

Two types of rates have been developed to reflect use of benefits. The percent of persons "ever enrolled" in an area using a benefit in the year measures the number using that benefit in relationship to all persons who were enrolled at any time during the year, no matter for how short a time. This base is larger than the average number of persons enrolled approximated by the July 1 enrollment,[9] the figure used to compute the number of persons served per 1,000 enrolled population.

Because the experience of all individuals ever enrolled is described in this report, table 1.1 gives counts of all persons enrolled in the Medicare program for any length of time during 1969. The total number of persons ever enrolled was obtained by adding to the January 1 enrollment those persons whose Medicare coverage began in the subsequent months of 1969. This procedure was applied by State, and by age, race, and sex. The resulting total was estimated to be 21.3 million. This "ever enrolled" figure is the base for the percents shown in tables A and C. Tables 1.3, 1.6, 1.13, 1.16, 1.23, 1.26, 1.31, 1.34, 1.39, 1.42, 1.47, and 1.50 are based on the mid–year enrollment recorded for July 1, 1969.

Source of data.—With the exception already noted of home health services, bills received in the HI program and payment records received in the SMI program for a 5–percent sample of the insured population, and entered in Social Security Administration records by October 1971 are included in this report. The sample population was identified by selected digits of the health insurance claim number and all counts (except for home health services) were multiplied by 20 to obtain the estimated total program figures shown in the tables. Utilization and reimbursement for home health services are based on all records received. Data for 1969 to be published in other reports in this series will be based on the records included in the files through later dates, on samples of varying size, and no more accurate methods of measuring inflation for estimating total utilization.

Beside being incomplete to the extent that all bills for services in 1969 had not yet been filed by October 1971, the payments under the HI part of the program shown in this report reflect reimbursements based on interim rates, usually established as a per diem amount or as percentages of total charges. The final amount due each provider of medical services is determined after the end of his fiscal year on the basis of his audited reasonable costs of operation. Available audited cost reports for 1969 indicate that additional payments of about 5 percent were made over the amounts paid on an interim basis.

Data for the HI program include all short–stay hospital bills for discharges in 1969, and bills from psychiatric, tuberculosis, and other long–stay hospitals for any services in 1969. If a long–stay hospital bill covered care in 1969 and 1970, the bill was prorated between the two years according to the number of days of care in each year. Bills for outpatient hospital services were included only when the date of last service was in 1969. The same rule was followed for bills for home health services. The payment record used for the SMI program was included if the service recorded took place in 1969.

Only bills on which there has been some reimbursement are entered into Social Security Administration records. As described under "Provisions of the Law," the first $44 of covered charges under the HI program and the first $50 of covered charges under the SMI program, are paid by the insured person or by someone on his behalf. Remaining covered charges under the HI program are reimbursed at interim rates as described above. Under the SMI program, 80 percent of the remaining charges allowed by the insurance carrier are paid. These amounts are reflected as reimbursements in the general tables in this report.

Comparison with Current Medicare Survey.—The estimated 8.2 million persons reimbursed for SMI services received in 1969 was far less than the number of insured persons aged 65 and over who reported during household interviews that they used some services covered under this part of the program. The SSA record system provides information only for persons whose charges exceeded the $50 deductible and who filed a claim for payment. In order to obtain estimates of all services used, SSA conducts a continuing monthly Current Medicare Survey (CMS). Data from the CMS interviews of a sample of the insured population showed that an estimated 16 million persons stated they had used some covered SMI services in 1969; and of that number, 9.9 million had used sufficient services to have met the $50 deductible. However, estimates based on recorded data from bills in the Social Security Administration system showed that only 8.2 million persons received any reimbursement (table A). Apparently, a considerable number of persons who seemed to be eligible for reimbursement did not receive any payments from the program.

To determine how this difference arose, SSA records were searched for all persons in the CMS sample who reported use of SMI services in 1969. Results showed that part of the difference was accounted for by 160,000 persons who had reached but had not exceeded the $50 deductible and about 915,000 persons who were eligible for reimbursement but who did not file a claim. Of these, 250,000 persons were eligible for reimbursement through use of the carryover provisions of the law which permits charges accrued toward the deductible in the last 3 months of the year to be credited toward the deductible in the next year. It seems likely that many did not understand this provision. The balance of the difference may have resulted from an

[8] *Ibid.*

[9] For 1969 the "ever enrolled" population was 21,315,076 and the July 1 enrollment was 20,014,235 persons.

overestimate in the CMS of persons exceeding the deductible or an underestimate in the present report, which is based on a 5–percent sample of the Medicare population. The amounts entered into CMS computations are "total" rather than "allowed" charges; this fact alone tends to overestimate persons meeting the deductible according to CMS.

Type of Benefit Reimbursed

Covered services for which reimbursements are made under HI include: inpatient hospital services (INP); posthospital extended care facility services (ECF); and posthospital home health agency services (HHA-A). SMI covered services include: physicians' and other medical services (PHYS); outpatient hospital services (OUT); and home health agency services (HHA-B).

The combinations of benefits used by each person during 1969 are shown in table B. One type of benefit was used by 48 percent of all persons using reimbursed services in 1969. Over 4 out of 10 persons (41 percent) used only physicians' services while another 4 percent used only inpatient hospital services. Two types of benefits were used by 39 percent of all persons using reimbursed services; of these beneficiaries, more than three-fourths used physicians' services in combination with inpatient hospital services.

Average reimbursement per person rose rapidly as the number of benefits used increased. Where only one benefit was used—mostly physician services—the average reimbursement in 1969 was $114; but when two benefits were used—most commonly hospital and physician services—the average jumped to $924, up 6.3 percent over 1968. While the average reimbursement for all persons using two types of benefits was $924, payments to persons using inpatient hospital services in combination with extended care facility services, and physicians' services together with inpatient hospital services averaged $1,881 and $1,112, respectively. Only 14 percent of all persons reimbursed used more than two types of benefits. However, these users accounted for 41 percent of the total reimbursements in 1969 and averaged $2,100.

Use of Reimbursed Services

Age, race, and sex.—Over 40 percent of all persons covered by Medicare at any time during 1969 received reimbursement for covered services during the year.

Table B.—Number of persons, total reimbursement, percentage distribution, average reimbursement, and percent increase for persons using specified combinatiins of reimbursed benefits under the health insurance program, 1968 and 1969

Demographic factors such as age, race, and sex influence both the total utilization of reimbursed services and the types of services used. Among other factors influencing utilization of medical services are types of illnesses, the perceived need for care, the accessibility of various types of care, and charges for services.

The proportion of ever enrolled persons using reimbursed services under HI and/or SMI increased with age (table C). This occurred, with few exceptions, within each race and sex group. Rates for women exceeded those for men in every age group, except at ages 85 and over where the reverse occurred. The difference in the percentage of persons reimbursed between the two race groups remained around 10 percentage points for both men and women; the gap increased for both sexes.

Compared with 1968, the percentage of persons using reimbursed services increased more for persons of other races than for the white population, 11 percent and 7 percent respectively. This continues the change observed between 1967 and 1968, but the rate of increase has slowed, as shown below.

Percent increase	1967–68		1968–69	
Sex	White	Other races	White	Other races
All persons	8.2	15.5	7.0	11.0
Men	7.9	13.0	6.5	8.9
Women	8.5	17.5	7.4	12.2

The percentage of the 65–66 year age group using services is lower than that for the 67–68 year age group. Persons aged 65–66 had less opportunity to use covered services than the next older age group. Coverage for a person attaining age 65 can begin in the month he reaches this age. About 120,000 persons enrolled for HI during each month of 1969. Most additions to the rolls were persons who had just attained age 65.[10] Persons newly enrolled in February had 11 months in which to use services; in March, 10 months; etc. On the average, these new entrants during 1969 had 6 months rather than 12 in which to use services. Since all persons enrolled for any part of 1969 are counted in the total number ever enrolled (table 1.11), the percentage of persons aged 65 utilizing reimbursed services is understated in comparison with age groups that were likely to have been in the program for the full year.

Geographic variations.—The Medicare benefits are used at differing rates across the country depending on the availability of services and the nature of illnesses. Nationally 41 percent of all persons covered by Medicare in 1969 were reimbursed for covered services compared to 38 percent in 1968 and 35 percent in 1967. The geographic divisions showed a range in proportion

[10] Social Security Administration, Office of Research and Statistics *Medicare: Health Insurance for the Aged, 1969, Section 2:* Enrollment, (Washington, D.C.: U.S. Government Printing Office, 1972).

of the insured population reimbursed in 1969 from 35 percent for the East South Central States to 51 percent for the Pacific States. Each division experienced an increase in this proportion from the figures for the previous years while retaining the same rank:

Geographic division	1967	1968	1969
United States	34.9	38.0	40.7
New England	35.9	38.1	40.4
Middle Atlantic	36.5	39.8	42.2
East North Central	33.0	35.6	37.7
West North Central	34.3	37.9	39.6
South Atlantic	33.0	36.7	38.4
East South Central	31.3	33.2	35.0
West South Central	35.3	39.3	42.0
Mountain	39.4	41.9	43.6
Pacific	44.3	47.9	50.6

Geographic data on persons served per 1,000 enrolled for HI and for SMI are shown in table D and figures 1 and 2. Rates of utilization for HI and SMI by type of service appear in table 1.3. Rates are based on the midyear population because the ever enrolled population has not been computed for HI and SMI. For the United States, persons reimbursed per 1,000 enrolled for HI showed a slight increase over 1968 while for New England, Middle Atlantic, South Atlantic and Mountain States this figure decreased. For SMI, however, the rates for 1969 showed increases over 1968 of about 8 to 9 percent for each of the geographic divisions.

Comparisons between 1968 and 1969 are made in table E for persons ever enrolled, persons using reimbursed services and percent of persons ever enrolled using reimbursed services. Nevada, Arizona, and Florida—the "retirement" States—had the greatest percentage increase of persons ever enrolled for HI and/or SMI between 1968 and 1969, from 5 to 7 percent. However, Mississippi and New Mexico, with increases in the persons ever enrolled of .9 percent and 3.3 percent respectively, showed substantial increases in the persons served between the two years. Neither of these States added "buy-in" agreements during 1969; therefore, it can be assumed that the increases in persons served result from a greater understanding of the benefits of the program and greater availability of and demand for services.[11] Hawaii, District of Columbia, North Dakota, and West Virginia showed decreases in the number of persons served; while, with the exception of District of Columbia, each showed increases in the number of persons ever enrolled between the two years.

Use of extended care facilities.—In 1969, 19.7 per 1,000 persons enrolled used the ECF benefit under Medicare (tables F and 1.3), slightly less than in 1968 (20.3). Small decreases were apparent by age, race, and sex with the exception of persons aged 69 through 72. Women aged 69 and 70 showed an increase of 12.0 percent and men aged 71 and 72 showed an increase of 6.7 percent between the two years. ECF benefits under Medicare are reimbursable only for those persons discharged from a hospital after a stay of 3 days or more who are admitted to an extended care facility within 14 days of discharge (see "Provisions of the Law").

[11] For an explanation of State "buy-in" provisions of the Medicare law see Social Security Administration, Office of Research and Statistics, *Medicare: Health Insurance for the Aged, 1969, Section 2: Enrollment* (Washington, D.C.: U.S. Government Printing Office, 1972).

About 10 percent of persons hospitalized during the year used ECF benefits (table G). This figure was lower than that for 1968 (10.3 percent) and for 1967 (9.8 percent), the first year ECF benefits became payable. ECF use was substantially higher among hospitalized women than for men in every year. Use by the white population was greater than for persons of all other races; and increased dramatically with increasing age (4 percent at ages 67–68 to 21 percent at 85 years and over).

The ratio of persons receiving ECF services to persons hospitalized is based on all persons discharged from a hospital. Since some hospitalized persons died in hospital the ratios of ECF to hospital use shown in table G are underestimates. If the ratios of ECF to hospital use were based on persons discharged alive the ratio would be considerably larger, especially at older ages since the proportion of discharges dying in hospitals increases with age.

Home health services.—Home health agency services under HI are limited to 100 visits for up to one year following discharge from a hospital or ECF; under SMI, Medicare allows up to 100 home health visits during a calendar year (see "Provisions of the Law"). Under HI, 9.5 persons per 1,000 enrolled were served by home health agencies while under SMI 7.5 persons per 1,000 enrolled received reimbursable services (table H). This represents an increase over 1968 of 15 percent for HI services and 4 percent for SMI. Under both HI and SMI, utilization increased with age, was higher for women than for men and for the white population compared with that of all other races. Even though the utilization of home health services was greater for whites than for other races, the percent increase under HI for 1969 for other races was twice that for the white population and under SMI four times greater.

Outpatient services.—Slightly more men than women used outpatient services and far more persons of other races than the white population (table J). Among persons of other races, however, the difference in utilization rates by sex was reversed; women had considerably higher rates than men—106.9 per 1,000 enrolles compared with 97.5 per 1,000 respectively. The pattern of utilization by age for men and women of the white population appeared similar (figure 3). However, for other races the utilization rate for men continued to rise with increasing age while for women utilization decreased substantially after age 80 (figure 3).

Inpatient hospital services.—Utilization of inpatient hospital services for 1969 compared with 1968 continued to show increases by age, sex, and race (table K and figure 4). Rates for men, 216.7 per 1,000 persons enrolled, were higher than those for women, 196.2 per 1,000, as they had been in prior years. Rates for persons of all other races continued to be lower than those for white—164.5 per 1,000 enrollees compared with 208.4 per 1,000 respectively. Nevertheless, the percent increase in hospitalization rates for persons of all other races, 7 percent between 1969 and 1968 was twice that for whites during the same two years. (This pattern was the same as had been observed between 1968 and 1967.) As a result, the number of whites per 1,000 enrolled reimbursed for inpatient hospital services was 27 percent higher than that for persons of other races in 1969 (table L), compared with 31 percent in 1968 and 36 percent in 1967.

Physicians' and other medical services.—The number of persons per 1,000 enrolled reimbursed for physicians' and other medical services increased with age, was higher for women than for men, and was 38 percent greater for white persons than for persons of other races during 1969 (table M and figure 4). In general, utilization rates for reimbursed SMI services were 8 percent higher in 1969 than in 1968, the same relative change registered a year earlier. However, the percent increase in utilization rates between 1968

and 1969 for persons of other races was over 10 percent while that for the white population was less than 8 percent.

Reimbursement Per Person Served

Type of service.—The average amount reimbursed per person receiving covered services under the health insurance program in 1969 was $696 (tables N, 1.5, and 1.15). For men the average was more than $100 greater than for women, $764 compared with $651. Generally, the average amounts increased with age, were greater for men, and were higher for whites.

Reimbursements for persons who used both HI and SMI services averaged $1,411 for white persons and $1,374 for persons of other races, increases over 1968 of 8 percent and 10 percent, respectively. These changes were smaller than corresponding increases in 1968 over 1967 of 19 and 27 percent.[12]

Persons reimbursed for HI services only, a small group of 375,000 persons whose characteristics may differ from those of the remainder of the Medicare population, averaged $539. The average reimbursement for persons of other races reimbursed for HI services only was $180 greater than for white persons. This difference between the races by sex was $139 for women and $222 for men. In 1968 these differences were $106, $90, and $121, respectively.

About 88,000 of the 19.2 million persons enrolled for SMI coverage were enrolled for SMI only because of ineligibility for HI entitlement. Over 4.4 million persons received reimbursements averaging $94 per person for SMI services only. Therefore, almost all of the 4.4 million persons reimbursed for SMI services only used no HI services, did not exceed the HI deductible or failed to submit claims for HI services. The average reimbursement for 1969 represents no change over 1968. The figures for whites showed a slight decrease, while those for persons of other races showed a slight increase compared to 1968.

Average reimbursement by each type of benefit is shown in table 1.15. Generally, average reimbursements increased with age, were higher for men than for women, and were greater for white persons than for persons of all other races. The average for inpatient hospital services is higher for men than for women and for persons of other races compared to the white population (figure 5). By age, the average was higher for men and women of other races below age 75 and lower at the older ages. Average reimbursements for physicians' and other medical services were considerably higher for men than for women and for the white population compared with that of other races (figure 6).

Comparisons of average reimbursements for each type of benefit by race for age and sex are shown in table 0. Ratios of reimbursement per person served for whites to those for persons of other races of less than 1 indicate that average reimbursements for whites were less than for persons of other races. Ratios of less than 1 appeared consistently in ECF services, outpatient services, and SMI home health services, frequently in inpatient hospital services (except for persons aged 75 and over), and HI home health services, but did not appear at all in physicians' and other medical services.

Geographic variation.—As stated previously, reimbursements for a given area are dependent upon such factors as availability and accessibility of services, charges for services, demographic characteristics of the area population and types of incidence of illness. The average reimbursement by type of services for each of the States is shown in table 1.5 and in figures 7 and 8.

The ratios of average reimbursement by type of service for each geographic division to that of the United States are shown in table P. For inpatient hospital services and extended care facility services the New England States exceed the national average reimbursements by 27 percent and 17 percent respectively. For SMI the Pacific States showed considerably larger average reimbursements than the United States or the other geographic divisions. The East South Central States continued to have the lowest reimbursement ratios for each type of service, while the Pacific States had the highest in almost every instance.

Distribution of Amounts Reimbursed

Age, race, and sex.—As in earlier years over 25 percent of all persons reimbursed for Medicare services received less than $50 each (figure 9). As shown in tables Q and 1.17–1.20, 2.2 million persons each receiving less than $50 out of the 8.6 million served were reimbursed $51 million, of a total reimbursement of $6 billion. On the other hand, 5 percent of the persons served (427,000 persons) each receiving $3,000 or more,

were reimbursed 33 percent ($2 billion) of the total reimbursed. In general, the percentage of persons reimbursed less than $50 decreased with age and was higher for women than for men. At the other extreme, the percentage of persons reimbursed $3,000 or more increased with age and was higher for men in every age group. Similar distributions were observed for persons of all other races.

Comparisons between the 3 full calendar years of the Medicare program show that in 1969, for the first time, 50 percent of the total reimbursed was for reimbursements of $2,000 or more and that this represented reimbursements to 10 percent of all persons served (table R). Almost two-thirds of all persons served received reimbursements of less than $500 which represented 12 percent of the total reimbursements (figure 9).

Table R.—Percentage distribution of persons served and estimated amounts reimbursed under HI and/or SMI, by amounts reimbursed, 1967, 1968, and 1969

Reimbursement class	Persons served			Amount reimbursed		
	1967	1968	1969	1967	1968	1969

2,000 or more	7.5	9.3	10.0	39.2	46.6	50.0

Geographic distribution.—The percentages of persons served and amounts reimbursed by geographic division and amount reimbursed are shown in table S. The New England States had the largest percentages with reimbursements of less than $50 and $3,000 or more (28 percent and 7 percent, respectively). Persons with reimbursements of $3,000 or more represented about 40 percent of total reimbursements for New England and the Pacific States. The East South Central States had the lowest percentages for both persons served and total reimbursed in the $3,000 or more interval (3 percent and 19 percent, respectively).

Persons Who Used No Reimbursed Services

Almost 12.8 million persons of the 21.3 million enrolled in the Medicare program at any time during 1969 received no reimbursement (tables 1.1 and 1.11). The number of persons receiving no reimbursement was determined by subtracting the number of persons who received reimbursement from the number of persons enrolled at any time during the year.

Persons who received no reimbursement are defined as: those who used no covered services; those who used services that were not covered under Medicare; those who used covered services for which charges did not exceed the HI $44 deductible or the SMI $50 deductible; and those who failed to submit claims even though they used services for which charges were in excess of either deductible.

Group practice prepayment plans which deal directly with SSA rather than through an intermediary are reimbursed for the services they provide—differently from other providers of services. Therefore, the reimbursement data did not include approximately $28

million which was paid to the direct dealing group practice prepayment plans. This could create an understatement in both per capita utilization and reimbursement in geographic areas where group practice prepayment plans are heavily used, especially the Middle Atlantic and Pacific States which include New York and California, respectively.

Group practice prepayment plans (GPPP) enrollment for supplementary medical insurance benefits in 1969 consisted of 273,000 persons aged 65 and over. New York and California accounted for almost 60 percent of the total GPPP enrollment which in New York was 82,000 and reimbursements $7.5 million. GPPP's in California received reimbursements of $8 million and had 77,000 Medicare enrollees. Total enrollment and reimbursement for New York was 1.9 million persons and $200 million, and for California was 1.7 million persons and $245 million.

Reliability of Estimates

The sample estimate and an estimate of its standard error permit us to construct interval estimates with prescribed confidence that the interval includes the average result of all possible samples.

To illustrate, if all possible samples were selected, each of these were surveyed under essentially the same conditions, and an estimate and its estimated standard error were calculated from each sample, then—

i. approximately two-thirds of the intervals from one standard error below the estimate to one standard error above the estimate would include the average value of all possible samples. We call an interval from one standard error below the estimate to one standard error above the estimate a two-thirds confidence interval.

ii. approximately nineteen-twentieths of the intervals from two standard errors below the estimated errors below the estimate to two standard errors above the estimate would include the average value of all possible samples. We call an interval from two standard errors below the estimate to two standard errors above the estimate a 95-percent confidence interval.

iii. almost all intervals from three standard errors below the sample estimate to three standard errors above the sample estimate would include the average value of all possible samples.

Thus, for a *particular* sample, one can say with specified confidence that the average of all possible samples is included in the constructed interval.

To derive estimates of standard errors that would be applicable to a wide variety of items and could be prepared at a moderate cost, a number of approximations were required. As a result, the standard errors presented provide a general order of magnitude rather than the exact standard error for any specified item. The following examples illustrate the use of the standard error tables in forming confidence intervals.

Table T contains approximations to standard errors for estimates of the number of persons using specified services and should be used with such data shown in tables 1.1, 1.2, 1.7, 1.11, 1.12, 1.17, 1.21, 1.22, 1.27, 1.29, 1.30, 1.35, 1.37, 1.38, 1.43, 1.45, 1.46, and 1.51. To estimate approximate standard errors of numbers not presented directly in the tables, linear interpolation provides a satisfactory basis for estimation.

As an illustration, table 1.1 shows 90,240 persons using both HI and SMI services in Indiana. Using linear interpolation in table T for the estimated number of persons gives

$$974 + (1{,}375 - 974) \times \frac{90{,}240 - 50{,}000}{100{,}000 - 50{,}000} = 1{,}297$$

as the estimated standard error for this estimate. Based on these data the two-thirds confidence interval is from 88,943 to 91,537 persons and a conclusion that the average estimate of total persons using both HI and SMI services in Indiana derived from all possible samples lies within a range computed in this way would be correct for roughly two-thirds of all possible samples. Similarly, we could conclude that the average estimate of total persons using both HI and SMI services in Indiana derived from all possible samples lies within the interval from 87,646 to 92,834 with 95-percent confidence.

Table T also may be utilized to obtain approximations to the standard errors of estimates of persons *not* using services. For example, again in the case of Indiana, the number using *no* services is shown in table 1.1 to be 334,274. Entering and interpolating in table T for 334,274 gives a standard error of 2,463. The average estimate of total persons using no services in Indiana derived from all possible samples would have roughly a 2 out of 3 chance of lying between 331,811 and 336,737; a 19 out of 20 chance of lying between 329,348 and 339,200; and an almost certain chance of lying between 326,885 and 341,663.

Table U, approximate standard error of estimated number of persons served per 1,000 enrolled, is for use in connection with data in table 1.3, 1.13, 1.23, 1.31, 1.39, 1.47. A process of double linear interpolation may be needed with table U, since the joint data on both the number of persons enrolled (in 1,000's) as well as the estimated number of persons receiving services per 1,000 enrolled may both require interpolation.

As an illustration, in table 1.3, in Wyoming, 257.6 persons per 1,000 utilized some form of reimbursed HI.

Table T.—Approximate standard error of estimates of number of persons using services

Estimated number of persons	Standard error
1,000	138
5,000	308
10,000	436
25,000	689
50,000	974
100,000	1,375
150,000	1,682
200,000	1,940
250,000	2,167
500,000	3,046
1,000,000	4,255
2,000,000	5,868
3,000,000	6,998
4,000,000	7,857
5,000,000	8,527
6,000,000	9,050
7,000,000	9,451
8,000,000	9,744
9,000,000	9,940
10,000,000	10,043
11,000,000	10,057
12,000,000	9,982
13,000,000	9,816

Enrollment for Wyoming on July 1, 1969, was 30,437. Interpolating first to determine the standard error on 257.6 for a base of 25,000 enrolled persons gives 14.0. Similarly, interpolating for a base of 50,000 gives 9.9 as the standard error. The second part of the double linear interpolation is completed by interpolating between those derived values for the enrollment base of 30, 437. This gives the final estimated standard error of 13.1 persons per 1,000 enrolled. Thus, the average estimate of persons per 1,000 that used some form of reimbursed HI derived from all possible samples would have roughly a 2 out of 3 chance of lying between 244.5 and 270.7.

Table V provides approximations of standard errors of percents of persons served for use in connection with tables 1.8, 1.18, 1.28, 1.36, 1.44, and 1.52. Again, double linear interpolation will be needed for values not directly shown in the table.

Table U.—Approximate standard error of estimated number of persons served per 1,000 enrolled

Estimated number of persons served per 1,000 enrolled	Approximate base of rate (number of persons enrolled in thousands) [1]												
	25	50	100	250	500	750	1,000	2,500	5,000	10,000	20,000	21,000	22,000

Table W shows approximations to *relative* standard errors for total amounts reimbursed and for average reimbursement per person served. A relative standard error (expressed in percent) is 100 times the standard error of an estimate divided by the estimate. The relative errors are used as multipliers of estimated values of amounts reimbursed or average reimbursement per person served shown in tables 1.1, 1.4, 1.5, 1.9, 1.11, 1.14, 1.15, 1.19, 1.21, 1.24, 1.25, 1.29, 1.32, 1.33, 1.37, 1.40, 1.41, 1.45, 1.48, and 1.49 to derive the associated approximate standard errors. Then, these calculated approximate standard errors are interpreted and used in the same way as those shown in tables T, V, or W.

Another illustration comes from table 1.4. Total reimbursement for SMI for Tennessee was $23,373,000 and the number of persons served is shown in table 1.2 as 136,160. Interpolation in table W gives a relative error of 2.1 percent. The standard error of the estimate of the total reimbursed amount corresponding to this relative error is found by multiplying the estimated reimbursement by the relative error—that is, $23,373,000 multipled by 2.1 percent is about $491,000. The chances are 2 out of 3, therefore, that the average estimate of reimbursement derived from all possible samples lies in the range of $22,882,000 and $23,864,000.

Consider an illustration with data from table 1.1. Average reimbursement *per person served* for persons in New York using only HI services was $954.06 and the number of persons using the services was 30,420. Interpolation in table W is required, and use is made of the approximate relative errors in the column for average reimbursement per person served, HI. The relative error of the average reimbursement per person served is between 3.0 percent corresponding to 25,000 persons served and 2.1 percent corresponding to 50,000

Table W.—Approximate relative standard error of amount reimbursed or average reimbursement per person enrolled, or average reimbursement per person served

Estimated number of persons served (in thousands)	Relative standard error (percent)					
	Amount reimbursed or average reimbursement per person enrolled			Average reimbursement per person served		
	HI and SMI combined	HI	SMI	HI and SMI combined	HI	SMI
1	26.0	20.5	24.8	22.1	15.2	20.7
5	11.6	9.2	11.1	9.9	6.8	9.2
10	8.2	6.5	7.9	7.0	4.8	6.5
25	5.2	4.1	5.0	4.4	3.0	4.1
50	3.7	2.9	3.5	3.1	2.1	2.9
100	2.6	2.0	2.5	2.2	1.5	2.1
150	2.1	1.7	2.0	1.8	1.2	1.7
200	1.8	1.4	1.8	1.6	1.1	1.5
250	1.6	1.3	1.6	1.4	.96	1.3
500	1.2	.91	1.1	1.0	.68	.92
750	.94	.74	.90	.80	.55	.76
1,000	.82	.64	.78	.70	.48	.65
2,000	.57	.45	.55	.49	.34	.46
3,000	.47	.36	.44	.40	.28	.38
4,000	.40	.31	.38	.35	.24	.33
5,000	.36	.27	.34	.31	.21	.29
6,000	.32	.25	.31	.28	.20	.27
7,000	.30	.23	.28	.26	.18	.25
8,000	.28	.21	.26	.25	.17	.23
9,000	.26	.19	.24	.23	.16	.22

persons served. The interpolated value derived gives a relative error of 2.8 percent. Multiplying 2.8 percent by the $954.06 gives an approximate standard error of $26.71. Therefore, the chances are 2 out of 3 that the average estimate of average reimbursement derived from all possible samples lies in the range between $927.35 and $980.77.

In tables 1.6, 1.16, 1.26, 1.34, 1.42, and 1.50 there are shown data on average reimbursement *per person enrolled.* To determine a rough approximation of the relative error for such data, a series of steps, using the relative errors shown in table W are carried out. First, the user needs to associate on a worksheet, the *total* amount reimbursed (from tables 1.4, 1.14, 1.24, 1.32, 1.40, or 1.48) with the number of persons served (from 1.2, 1.12, 1.22, 1.30, 1.38, or 1.46) and the specific average reimbursement per person enrolled (from tables 1.6, 1.16, 1.26, 1.34, 1.42, or 1.50) which is of interest.

Then, the relative error of the *total* amount reimbursed is determined from table W as discussed above. This relative error is then used as the relative error of the associated estimate of *average* reimbursement per person *enrolled.* The standard error is obtained by multiplying the relative error by the associated average reimbursement per person enrolled.

For example, in table 1.6, $76.40 is shown as the average reimbursement for physicians and other medical services per person enrolled in Oregon. Table 1.4 shows that this average is derived from the $16,219,000 estimate of total reimbursement. There were 90,680 (in table 1.2) persons served in Oregon for this benefit. Now, linear interpolation in table W shows that the relative error in the amount reimbursed under SMI for an estimated 90,680 persons served is 2.7 percent and $76.40 gives a standard error of $2.06. Thus, the chances are 2 out of 3 that the average estimate of average reimbursement per person enrolled derived from all possible samples lies in the range of $74.34 and $78.46.

Provisions of the Law

The health insurance program for the aged, commonly called Medicare, was enacted on July 30, 1965, as Title XVIII of the Social Security Act, and became effective on July 1, 1966. The program, a part of the 1965 amendments (Public Law 89–97), makes available two separate but coordinated insurance coverages—hospital insurance, covering nearly all persons aged 65 and over, and supplementary medical insurance, covering those persons in this age group who enroll voluntarily and pay the premium. Changes in the program, effective in 1968, were incorporated in the 1967 amendments to the Social Security Act (Public Law 90–248), enacted on January 2, 1968.

Hospital Insurance Program

The hospital insurance program (Part A of Medicare) pays for a large portion of the costs of hospital and related post-hospital services. It is financed on a self–supporting basis through a tax on a portion of current earnings, paid by employees, employers, and self–employed persons. The proceeds of this tax are placed in the Hospital Insurance Trust Fund, from which reimbursements for benefits and administrative expenses incurred under the program are paid. The trust fund is reimbursed from general tax revenues for the costs of providing coverage for persons who qualify for hospital insurance but who are not eligible for monthly social security or railroad retirement benefits.

Inpatient hospital benefits.—The program covers the cost of covered services in a participating hospital for up to 90 days in a "benefit period" (a period beginning with the first day of hospitalization and ending 60 days after discharge from a hospital or a skilled nursing home). Full payment is made for the first 60 days of hospitalization after a deductible of $44 has been paid. For each of the remaining 30 days in the benefit period, the patient pays a coinsurance amount of $11 a day.

Each hospital insurance beneficiary also has a "lifetime reserve" of 60 additional hospital days, subject to a copayment of $22 a day. These additional days can be used at the patient's option whenever the 90 days covered in a benefit period are exhausted.

The program also provides benefits for emergency services rendered in a nonparticipating hospital. Each nonparticipating hospital providing emergency services elects whether to bill the program or to charge its patients directly. If they bill the program, they are reimbursed on the basis of reasonable costs of covered services rendered. If they bill the patient, he pays the bill and submits the itemized bill to SSA for reimbursement. The reimbursement paid is 60 percent of reasonable charges for room and board and 80 percent of the charges for ancillary services.

Inpatient tuberculosis and psychiatric hospital services are also covered. However, there is a lifetime limit of 190 days of care in a psychiatric hospital. Where an individual is a patient in a participating psychiatric hospital at the time he becomes entitled to hospital insurance, the number of days he was such an inpatient in the 150–day period immediately prior to his eligibility are deducted from his days of entitlement in that benefit period but not from the lifetime limitation.

Covered hospital services include hospital room and board in accommodations containing from two to four beds, nursing services except for private-duty nursing, drugs and biologicals, and all those services ordinarily furnished by a hospital to its inpatients. Coverage under the hospital insurance program does not include the services of physicians (including radiologists, anesthesiologists, pathologists and physiatrists) except for those services provided by interns or residents in training under approved teaching programs in a hospital.

The cost of the first three pints of blood (or equivalent amounts of packed red blood cells) furnished a patient during a benefit period is a deductible amount unless the patient arranges for replacement. Charges for any additional blood are covered under the program.

Post-hospital home health care benefits.—These benefits cover the cost of visiting nurse services and related home health services for as many as 100 visits for up to a year following the patient's most recent discharge from a hospital or participating extended care facility, provided he has been confined for at least 3 consecutive days in a hospital. A home health plan must be developed by a physician and implemented within 14 days after the patient's dis-

charge from the hospital or extended care facility. The home health care must be for further treatment of a condition for which he received services in the hospital or extended care facility.

Extended care facility benefits.—The program pays for the reasonable cost of all covered inpatient services in participating extended care facilities (ECF) for up to 100 days of such care in any benefit period, following discharge from a hospital after a stay of 3 consecutive days or more, and admission to an ECF within 14 days of discharge. Full payment is made for the first 20 days. For each of the remaining 80 days, the patient pays a coinsurance amount of $5.50 a day for benefit periods beginning after 1968. (The extended care coinsurance amount is set by law as one-eighth of the inpatient hospital deductible).

Supplementary Medical Insurance Program

The supplementary medical insurance program (Part B of Medicare) provides coverage of physicians' services, outpatient diagnostic and therapeutic services, additional home health services, other medical services and supplies, and outpatient physical therapy services. Individuals 65 years of age and over may enroll in the program regardless of whether they are eligible for social security retirement benefits. Monthly premiums paid by the individual are matched by the Federal government and paid into the Supplementary Medical Insurance Trust Fund, which reimburses carriers for benefits and administrative expenses incurred under the program.

The SMI program pays for 80 percent of the allowed charges for covered physician services and other medical services (or 80 percent of reasonable cost), after the patient has met a deductible of $50 during a calendar year. However, payment for outpatient psychiatric physician services is limited to the lesser of $250 or 50 percent of the allowed charges in any year after the $50 deductible has been met. The sum and percentage are derived from the statutory provision which permits an incurred expense for out-of-hospital treatment of mental illness of only $312.50 or 62.5 percent of actual expenses in a calendar year. Since only 80 percent of allowed charges can be reimbursed the effective maximum becomes $250.

To preclude the possibility of having to meet a deductible twice in a short period of time, a "carryover" provision is applied. Accordingly, covered expenses that are incurred in the last quarter of the year and counted toward the deductible in that year are also credited toward the deductible for the following year. However, the provisions concerning the deductible and the coinsurance do not apply to the services of radiologists and pathologists furnished to hospital inpatients.

Covered under the program are such benefits as physicians' services, including home, hospital, and office visits; services and supplies, including drugs and biologicals that cannot be self-administered, that are furnished as a part of a physician's professional service, most commonly in his office, and either rendered without charge or included in the physician's bills; diagnostic X-ray tests, diagnostic laboratory tests, and other diagnostic tests; X-ray; radium, and radioactive isotope therapy, including materials and the services of technicians; surgical dressings, splints, casts, and other devices used for reduction of fractures and dislocations; purchase or rental of durable medical equipment, including iron lungs, oxygen tents, hospital beds, and wheelchairs used in the patient's home (including an institution used as his home); ambulance service in cases where the use of other methods of transportation is contraindicated by the individual's condition; prosthetic devices (other than dental) that replace all or part of an internal organ, including replacement of such devices; leg, arm, back, and neck braces, and artificial legs, arms, eyes, including replacement if required because of a change in the patient's physical condition; and 100 home health visits during a calendar year—these visits being independent of those provided under the hospital insurance program.

Also covered are hospital services incident to physicians' services rendered to outpatients, and outpatient physical therapy services.

Eligibility

The Hospital Insurance Program.—Almost all persons aged 65 and over are eligible for benefits under the hospital insurance program. Included are those persons in this age group who are entitled to monthly social security cash benefits or payments from the railroad retirement system, regardless of whether they have applied for these cash benefits. During the period under consideration, a person could apply for hospital insurance protection even though he did not qualify for either social security cash benefits or a railroad retirement annuity if (1) he had attained age 65 before 1968, or (2) he would attain age 65 after 1967 with not less than three quarters of social security coverage, whenever acquired, for each calendar year elapsing after 1966 and before the year in which he would attain age 65; however, hospital insurance protection could not go into effect until the individual attained age 65. These two classes of individuals were "deemed insured" under a special transitional provision.

For persons who reach age 65 after 1968, the amount of work credits needed increases by three quarters each year—six quarters are needed by those who reached age 65 in 1969, nine will be needed by those who reach 65 in 1970, and so on. However, a person who qualifies for monthly benefits as the dependent or survivor of an insured worker does not need any work credits.

Federal employees who retired from the Federal service after July 1, 1960, and who had the opportunity to be covered under the Federal Employees Health Benefits Act of 1959, are ineligible for hospital insurance benefits under the transitional provisions. Also ineligible are aliens with less than 5 years of continuous residence in the United States, and those persons convicted of crimes against the security of the United States.

Hospital insurance protection can be retroactive for as many as 12 months before the month an individual files his application for entitlement. For example, an individual may apply 11 months after he attains age 65 and still be entitled to benefits from the month he attained age 65.

Supplementary medical insurance.—Persons entitled to benefits under the hospital insurance program (Part A), retired Federal employees and persons not eligible for hospital insurance under the transitional provisions may voluntarily participate in the SMI program.

Enrollment.—Individuals may enroll in the SMI program only during specified periods—the initial and the general enrollment periods. The initial enrollment period begins with the third month preceding the one in which an individual attains age 65 and ends 3 months after the month of attainment, a total period of 7 months. If he enrolls during the 3 months prior to the month in which he attains age 65, his coverage is effective with the month in which he attains age 65; if he enrolls during the month he attains age 65, his coverage begins the following month; if he enrolls in any of the 3 months after he attains age 65, his coverage begins from 2 to 3 months after enrollment, depending on how long he waited before enrolling.

The most recent general enrollment period was set between January 1, 1969, and March 31, 1969, for those who did not enroll in their initial enrollment period, or who having terminated their enrollment now wished to reenroll. Comparable periods are set to occur in every year. A person who enrolls during a general enrollment period may receive benefits starting on the first of July following the general enrollment period. An eligible individual must enroll within 3 years after the close of his initial enrollment period or within 3 years after termination of prior enrollment.

A State may enroll otherwise eligible individuals who receive cash payments under public assistance programs if the State requests such a State–Federal enrollment agreement to be established and pays the necessary premiums.

Enrollment terminates with the beginning of the month following the month of death. Up to April 1, 1968, railroad retirement beneficiaries and individuals entitled to monthly cash social security benefits could terminate their enrollment voluntarily by notifying the Social Security Administration in writing during a general enrollment period of the desire to withdraw from the program. Under the 1967 amendments effective April 1, 1968, beneficiaries may give notice of withdrawal at any time and their coverage will be terminated at the close of the following calendar quarter. Other enrolled persons may terminate their coverage by withholding payment of premiums or by notifying the Social Security Administration in writing of the desire to withdraw from the program. The enrollee is provided a 90–day grace period for the payment of overdue premiums after which coverage is automatically terminated. An individual who previously has terminated his enrollment may reenroll only in a general enrollment period beginning within 3 years of the date his previous enrollment had terminated. Reenrollment, however, is allowed only once.

Financing the Program

Hospital Insurance.—The hospital insurance program is financed on a long-range, self-supporting basis through a separate schedule of increasing tax rates on the first $7,800 of earnings in employment covered under the Social Security Act. The same tax rate applies to employees, employers, and self-employed persons. This rate was 0.60 percent for 1968–1972, and is scheduled to increase until it is 0.90 percent in 1987 and thereafter. The proceeds of this tax and that collected from the railroad retirement system are placed in a Hospital Insurance Trust Fund from which reimbursements for all benefits and administrative expenses incurred under the hospital insurance program are paid. The hospital insurance trust fund is reimbursed from general tax revenues for the cost of providing coverage for the almost 2½ million persons who qualify for hospital insurance but who do not receive monthly social security or railroad retirement benefits, that is, those "deemed insured."

Supplementary Medical Insurance.—Premiums are paid into the Federal Supplementary Medical Insurance Trust Fund by those persons enrolled for supplementary medical insurance (or on their behalf), and a matching amount is paid from general revenues by the Federal government.

The premiums of persons receiving social security cash benefits, railroad retirement, or Federal Civil Service annuities are deducted from their monthly benefit checks. Persons not receiving monthly benefits are billed quarterly for premiums by the Social Security Administration or the Railroad Retirement Board and have a 90–day grace period in which to make payment. Premiums may be paid for as long as a year in advance, and for individuals financially unable to make quarterly payments, arrangements can be made for monthly payments.

The monthly premium during 1969 was $4 a month. The premium rate of the supplementary medical insurance program may be adjusted annually if medical costs rise.

Under the 1967 amendments, States are permitted to enter into agreements with the Secretary, based on a request made before January 1, 1970, to buy in—that is, to pay the medical insurance premiums—for public assistance recipients aged 65 or over who were receiving money payments under an approved public assistance plan and for all aged persons eligible to receive medical assistance under an approved Title XIX plan.

Administration of the Program

Hospital Insurance.—Under the hospital insurance plan, groups or associations of providers, on behalf of their members, may nominate a national, State, or other public or private agency or organization to serve as intermediary in the claims process. A member of an association is free, however, to receive payment from an approved intermediary other than its association's nominee, if approved by the Secretary and agreeable to the intermediary selected. In addition, a provider may deal directly with the Social Security Administration.

The Secretary may enter into an agreement with a nominated organization if he finds this to be consistent with effective and efficient administration of the hospital insurance program. The intermediary makes payments to providers for covered items and services on the basis of reasonable cost determinations and assists in the application of safeguards against unnecessary utilization of covered services. The agreement may also call for (1) furnishing consultative services to assist providers to establish and maintain necessary fiscal records and otherwise qualify as providers of services, (2) serving as a center for communicating with providers, and (3) making audits of provider records. Generally speaking, the Social Security Administration utilizes the services of the hospital insurance intermediary in making payments for home health and outpatient hospital services covered under medical insurance.

Payment may be made for a beneficiary for covered emergency inpatient hospital services or covered emergency outpatient hospital services where the hospital is not a participating facility and agrees not to charge the beneficiary for covered services. Such a hospital may be outside the United States if it is more accessible than the nearest hospital in the United States adequately equipped to treat the patient.

Requests for payment for covered services must be signed by the beneficiary (or someone for him, if he is unable to do so). Payments are made on the basis of reasonable costs for these services to participating providers of services, that is, hospitals, extended-care facilities, and home health agencies, who have been certified for participation.

In some instances, hospitals may bill for physician services rendered to inpatients. In these cases, payment is made by the Part A intermediary. Depending on the nature of the billing, funds are transferred from the SMI trust fund to the HI trust fund to cover the cost of these services, or are paid directly from the SMI trust fund.

The intermediary selected by the provider reviews the claims for payment and pays the provider. Actual payment is made on the basis of an interim rate established between the provider and the intermediary. Final settlement based on each provider's operating year is made on the basis of a cost report submitted by the provider, and subject to an independent audit.

No payments can be made to Federal providers of services except for emergency services, unless this provider serves as a community institution. In addition, payment cannot be made to a provider for those services it is obligated to render at public expense under Federal law or contract.

Supplementary Medical Insurance.—Under the medical insurance program, the Secretary of Health, Education, and Welfare may enter into contracts with carriers for the performance of specified administrative functions. The carriers' principal function is to determine whether charges are allowable (reasonable) and to make payment.

The carrier selected by the Secretary of Health, Education, and Welfare to serve as an intermediary determines the allowed charges for bills submitted for each medical care service covered by the program and pays 80 percent of this amount after the $50 deductible has been met.

The allowed charge for the service may be paid to the patient, or the patient may assign the bill for collection to the physician or other supplier of the service, if he is willing to accept assignment. In the former situation, the patient submits an itemized bill to the carrier and is reimbursed; in the latter, the physician or other supplier submits the bill and is reimbursed. When the payment is made directly to the physician (or supplier) on assignment, the allowed or reasonable charge determined by the carrier is the total charge. In both situations, the patient is responsible for the first $50 of the charges for covered services he receives during the year and the amount of the bill over 80 percent of the allowed charges.

The law instructs the carrier to consider the following criteria in determining the "allowed" charge:

(1) the customary charge for the service generally made by the physician or other person furnishing such services; and
(2) the prevailing charge in the locality by other physicians and suppliers for similar services.

The law also specifies that the "allowed" charge cannot be higher than the charge applicable for the similar service rendered under comparable circumstances to the carriers' own policy holders or subscribers. For the year 1969, carriers were instructed

to maintain allowed charges at the levels existing at the beginning of the year.

Carriers also have the authority and responsibility to determine, in a given case, whether a claim is for a covered service and to deny claims for noncovered or excluded items or services. In addition, carriers are to assist in the application of safeguards against unnecessary utilization of services furnished eligible individuals.

Most services covered by the medical insurance program are rendered on a fee–for–service basis. However, services furnished under group practice prepayment plans are normally rendered in return for predetermined premium payments. In recognition of the need for special adaptation of the Medicare payment procedures for services rendered by group practice prepayment plans, the law provides that an organization which furnishes medical and other health services (or arranges for their availability) on a prepayment basis, may elect to be paid 80 percent of the reasonable cost of services in lieu of 80 percent of the allowed charge for such services.

The 1967 amendments to the Social Security Act introduced a time limit on filing of claims. For bills incurred in the supplementary medical insurance portion of the program after March 1968, claims must be filed no later than the close of the calendar year following the year in which the services are furnished. For services provided during the last 3 months of the calendar year, bills may be submitted through the end of the second year following.

General Tables

Notes

The sample: Except for figures on the enrolled population and on home health services, all data shown in this report are based on the experience of a 5-percent sample of the enrolled population. The sample selection was determined by specified digits of the individual's health insurance claim number. The enrolled population is a complete count of the file; figures were published in this report series in Social Security Administration, Office of Research and Statistics, *Medicare: Health Insurance for the Aged, 1969, Section 2: Enrollment.* Figures on home health services are also a complete count. The reliability of the sample is discussed under "Reliability of Estimates." Except for tables 1.5 and 1.15, and as noted above, figures are sample counts multiplied by 20.

Health Insurance for the Aged: The program, commonly known as Medicare, that pays for part of the costs of hospital and medical services for participating persons aged 65 and over.

Hospital insurance and supplementary medical insurance: The two types of coverage provided by the program. See "Provisions of the Law."

Area of residence: The address to which the enrollee's cash benefit check is being mailed or the mailing address recorded in the Health Insurance Entitlement (HIE) master file. Temporary or permanent changes of residence are reflected in the data to the extent that such changes are reported to the Social Security Administration. Services reported for persons whose address changed during 1969 are shown at the respective addresses on file at the time the geographic information was added to the utilization data.

All areas: Consists of the United States, Guam, Puerto Rico, Virgin Islands, other outlying areas, and foreign countries.

United States: Consists of the 50 States, the District of Columbia, and residence unknown.

Other outlying areas: Consists of American Samoa, the Canal Zone, Canton Island, Caroline Islands, Mariana Islands, Marshall Islands, Midway Islands, and Wake Island.

Persons ever enrolled: All persons eligible for benefits under hospital insurance and/or supplementary medical insurance at any time during 1969.

Persons enrolled as of July 1, 1969: See Social Security Administration, Office of Research and Statistics, *Medicare: Health Insurance for the Aged, 1969, Section 2:* Enrollment. These figures are the base for rates shown in table 1.3, 1.6, 1.13, 1.16, 1.23, 1.26, 1.31, 1.34, 1.39, 1.42, 1.47, and 1.50.

Persons served: Persons for whom reimbursements were made for covered services under Medicare. A person served (using reimbursed services) may receive one or more of the types of services shown in the tables and would be counted in each appropriate column, but only once on the total column.

Personal Characteristics:

Age: In completed years on July 1, 1969, for all persons alive on December 31, 1969, and in completed years on the date of death for all persons deceased in 1969. Data for persons who reach age 65 between July and December are tabulated as 65 years of age.

Race: White, all other races, or race unknown as entered in the HIE master file from basic records completed by the primary beneficiary. Race unknown is included in the totals for ALL PERSONS by age and by sex but is not shown separately.

Sex: As designated in the HIE master file.

Amounts reimbursed:

Hospital insurance: Interim amounts paid from the *Hospital Insurance* Trust Fund to participating providers for covered services received by persons enrolled in the program. Reimbursements exclude deductibles, coinsurance amounts, and noncovered services. See "Provisions of the Law."

Supplementary medical insurance: The amounts of charges for covered services that were allowed by carriers and paid from the Supplementary Medical Insurance Trust Fund to or on behalf of enrollees using services. Reimbursement amounts exclude the $50 deductible, and the 20 percent coinsurance. See "Provisions of the Law."
